

# HEADSET®

## Activator of rice physiology

### Description of the active ingredient

HEADSET is an activator of plant nutrition physiology specially adapted for rice. It increases the photosynthetic activity and plant mineral uptakes, leading to a better yield and quality.

### GA 142 seaweed filtrate: Exclusive of Goëmar

The active ingredients of Physio Activators are seaweed filtrates obtained by an exclusive Goëmar process that preserves and concentrates the seaweed's active ingredients. Oligosaccharines, in particular, have been isolated by the CNRS (National Scientific Research Center) as the active molecule. Subsequent studies proved the effect of Goëmar filtrates on plants' own capacities to absorb nutrients and to reproduce themselves.

### Recommendations

| Crop | Dose   | Application stage                              |
|------|--------|--|
| Rice | 1 L/Ha | From panicle initiation to beginning flowering |

### Composition

GA 142 seaweed filtrate  
Magnesium Oxide (MgO): 120 g/L  
Nitrogen (N): 83 g/L

### Physico-chemical characteristics

Liquid  
Density 1.33

### Compatibility

HEADSET is compatible with most common protection products and foliar nutrients.  
Always follow the label recommendations.
